1. Write a Python program to find words which are greater than given length k ?

```
[3]: def checkLengthOfString():  
    in_string = input("Enter the string: ")  
    in_length = int(input('Enter the length of the string: '))  
    out_string = []  
    for string in in_string.split(" "):  
        if len(string) > in_length:  
            out_string.append(string)  
    print(','.join(out_string))  
  
checkLengthOfString()
```

```
Enter the string: I am a good boy and good student  
Enter the length of the string: 4  
student
```

2. Write a Python program for removing i-th character from a string ?

```
[4]: def removeCharacter():  
    in_string = input("Enter the String: ")  
    in_char_num = int(input("Enter the ith Character: "))  
    out_string = ''  
    for ele in range(len(in_string)):  
        if ele != in_char_num:  
            out_string = out_string + in_string[ele]  
    print(out_string)  
  
removeCharacter()
```

```
Enter the String: ineuron  
Enter the ith Character: 2  
inuron
```

3. Write a Python program to split and join a string ?

```
[5]: def splitJoinString():  
    in_string = input('Enter the string: ')  
    print(f"Split String: {in_string.split(' ')}")  
    print(f"Join String: {' '.join(in_string.split(' '))}")
```

```
splitJoinString()
```

Enter the string: ineuron full Stack Data Science Course

Split String: ['ineuron', 'full', 'Stack', 'Data', 'Science', 'Course']

Join String: ineuron full Stack Data Science Course

4. Write a Python to check if a given string is binary string or not ?

```
[6]: def checkBinary():
    in_string = input('Enter the string: ')
    stun = 0
    for ele in in_string:
        if ele in ['0','1']:
            stun = 1
            continue
        else:
            stun = 0
            break
    statement = 'is a binary string' if stun == 1 else 'is not a binart string'
    print(f'{in_string} {statement}')

checkBinary()
checkBinary()
```

Enter the string: 101010

101010 is a binary string

Enter the string: 1254

1254 is not a binart string

5. Write a Python program to find uncommon words from two Strings ?

```
[7]: def unCommonWords():
    in_string_1 = set(input("Enter the String 1: ").split(' '))
    in_string_2 = set(input("Enter the String 2: ").split(' '))
    out_string = (in_string_1.union(in_string_2)).difference(in_string_1.
↪intersection(in_string_2))
    print(out_string)

unCommonWords()
```

Enter the String 1: shyamsundar

Enter the String 2: karmakar

{'karmakar', 'shyamsundar'}

6. Write a Python to find all duplicate characters in string ?

```
[8]: def duplicateChars():
    in_string = input('Enter the string: ')
    non_duplicate_list = []
```

```

duplicate_list = []
for ele in in_string:
    if ele not in non_duplicate_list:
        non_duplicate_list.append(ele)
    else:
        duplicate_list.append(ele)
print(f'Duplicate characters are: {list(set(duplicate_list))}')

duplicateChars()

```

Enter the string: full stack data science course

Duplicate characters are: ['t', 'u', 'a', 'e', 'c', ' ', 's', 'l']

7. Write a Python Program to check if a string contains any special character?

```

[9]: def checkSpecialChar():
    spl_chars = '@_!#$%^&*()<>?/\|}{~:.'
    in_num = input('Enter the string: ')
    count = 0
    char_list = []
    for ele in in_num:
        if ele in spl_chars:
            char_list.append(ele)
            count = count+1
    print(f'There are {count} Speical Characters in {in_num} which are_
↪{char_list}')

checkSpecialChar()
checkSpecialChar()

```

Enter the string: Data Science @ Ineuron by Sudhanshu & krish

There are 2 Speical Characters in Data Science @ Ineuron by Sudhanshu & krish
which are ['@', '&']

Enter the string: Brotherhood

There are 0 Speical Characters in Brotherhood which are []

[]:
